

FUTURE HARVEST NUTRIENTS

March 25, 2024

RE: Letter of Guarantee

To Whom It May Concern,

Future Harvest Development Ltd. manufactures plant nutrients and takes batch consistency and quality an utmost priority. Once a formulation has been established making changes is not something that is typically done. Should such an event occur we will inform the customer as quickly as possible, including the batch numbers prior to and after the changes.

The manufacture of the products tries to follow the good manufacturing practices (GMP) laid out by Health Canada for natural products wherever possible. There is currently no specific GMP that is specific to our industry. Quality control is completed on every batch including specific gravity, pH and electroconductivity. The results are then processed using statistical analysis, with values having to fall into 2 standard deviations of the mean before being deemed acceptable for sale.

In addition, our products are tested once per year for heavy metals, microbes (specifically coliforms and Salmonella), and the 96 pesticides (select products) which are monitored by Health Canada. When new data is compiled, this information will be posted publicly on the website in the form of a Certificate of Analysis.

Raw ingredients are typically sourced in North America, if an ingredient is imported from elsewhere all LOTS from the shipment will be quarantined and samples sent out for heavy metals analysis. Once the results are confirmed, the values will be compared against the guidelines set out by the CFIA and assuming they are under the maximum allowed the quarantine will be lifted.

Future Harvest Development Ltd. is committed to regulatory compliance and cooperates with all rules and regulations put out by Health Canada, the Canadian Food Inspection Agency, Transport Canada, and Natural Resources Canada.

Sincerely,

Loren Price
Director of Fertilizer Technologies
