

FUTURE HARVEST NUTRIENTS

Product Data Sheet

BUD START

DILUTION RATE:

Use 2 ml per litre or 2 cc per quart as an addition to your nutrient solution.

GUARANTEED ANALYSIS:

Available Phosphate (P₂O₅) 2%
Soluble Potash (K₂O) 1%

Derived from: Monopotassium Phosphate.

GROWTH STAGE:

Early flowering. For use during weeks 2 and 3 of flowering.

FREQUENCY:

Apply during the second week of flowering and repeat for the third week.

FOR USE IN:

Soil
Coco
Hydroponics

Bud Start is an early flower enhancer that will deliver striking visible results! This phosphorous-potassium booster is extremely effective in promoting a vigorous onset to a bloom cycle. It will assist as a weight gain supplement, as well as speeding up flower set development.

When using Bud Start, the size and amount of new flower sites on a fruiting crop is increased which causes them to expand and elongate. This early P-K boost speeds up and promotes a stronger start to flowering and has a positive effect on crop finishing times.

KEY FEATURES

- Can be used on short or longer flowering crops. Use once on short crops and twice for longer crops
- Helps stabilize pH, assisting plants in taking up all the nutrients they require during the important early flowering phase.
- Will minimally increase EC values, unlike other P-K products. Full strength fertilizer can be used without the need for dilution.
- Works with any branded fertilizer and additive products.

SIZE	HEIGHT X WIDTH	WEIGHT
500 mL	7.5 in x 2.5 in	1.1 lbs
1 L	9.0 in x 3.0 in	2.2 lbs
4 L	12.5 in x 6.3 in	9.0 lbs
10 L	14.5 in x 8.5 in	22.7 lbs
20 L	16.0 in x 10.0 in	48.5 lbs
208 L	35.0 in x 23.0 in	472.2 lbs
1000 L	46.0 in x 40.0 in	2270.8 lbs
