

FUTURE HARVEST NUTRIENTS

Product Data Sheet

PLANT FLUSH

DILUTION RATE:

Dilute 1 ml per 2 litres of water.

DIRECTIONS:

To treat over fertilization:

Run through system for 36 hours, then empty reservoir.

For use as a pre-harvest cleanser:

Run through system for 3-5 days.

For use as a system cleaner:

Use undiluted without plants in the system.

Contains: Polysorbate 20, EDTA,
Phosphoric Acid

FOR USE IN:

Soil
Coco
Hydroponics
Aeroponics

GROWTH STAGE:

*Appropriate for the last
two weeks before harvest.*

PLANT FLUSH is a 3-in-1 flushing/cleansing agent containing: a wetting agent, which allows for easier penetration of the medium; an acid, which will lower the pH of the medium out of the optimum level so nutrients will no longer be absorbed; and a chelating agent, which will solubilize any metal ions in the medium so they can be easily flushed out.

For optimum plant growth, high amounts of fertilizers are used during the vegetative and flowering stages; however, they become a liability before harvest. The abundance of leftover fertilizers in the growing medium can diminish the quality of smokable bud and prevent proper burning. Buds from a properly flushed plant often stay lit longer, have white ash, and be a smoother more pleasant smoke. An unflushed plant may burn poorly, have black ash, smoke harsher, and have an unpleasant taste.

KEY FEATURES

- Works as a cleaning agent for your hydroponic and aeroponic systems.
- Can be used to treat over fertilization.
- Cuts off nutrient supply from the roots to force the plant to use up nutrients in the plant.
- Works alongside and in addition to all industry leading manufacturer feed schedules.
- Concentration of active ingredients on par with competitor brands.
- Works for all grow media and methods.

SIZE	HEIGHT X WIDTH	WEIGHT
1 L	9.0 in x 3.0 in	2.2 lbs
4 L	12.5 in x 6.3 in	8.8 lbs
10 L	14.5 in x 8.5 in	22.0 lbs
208 L	35.0 in x 23.0 in	458.6 lbs
1000 L	46.0 in x 40.0 in	2204.6 lbs
